

NOW THE PENIS IS ABLE TO PENETRATE THE VAGINA WITHOUT
RAMMING INTO THE CERVIX (AKA, THE OPENING OF THE UTERUS).

CONTACT WITH PUBIC HAIR HELPS
TO STIMULATE THE CLITORIS.

THE FORESKIN RETRACTS AS
THE PENIS THRUSTS INWARD.

THE CORONA (THE RIDGE OF THE GLANS)
HELPS TO STIMULATE THE G-SPOT.

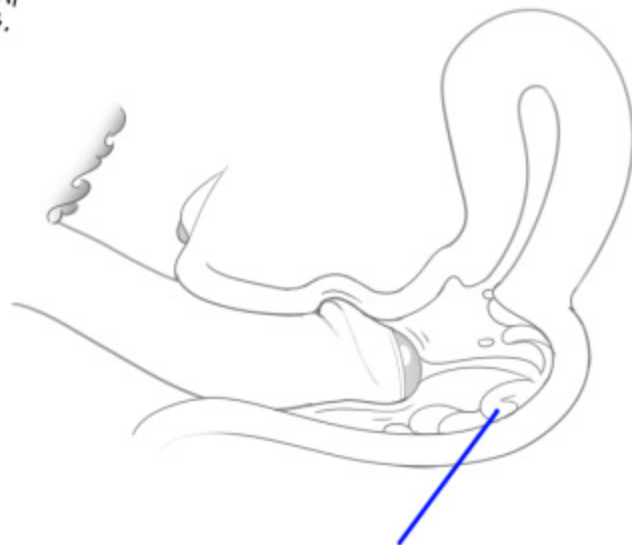

THE FORESKIN ROLLS BACK OVER
THE GLANS WITH OUTWARD MOTION.

WITH REPEATED THRUSTING, THE FORESKIN GLIDES BACK AND FORTH
INSIDE THE VAGINAL CANAL.

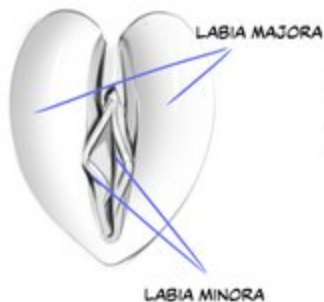

SENSITIVE NERVE ENDINGS THAT LINE THE INSIDE OF THE FORESKIN
PROVIDE PLEASURABLE SENSATIONS AS THE MOTION CONTINUES.

THIS GLIDING MECHANISM ALSO MINIMIZES FRICTION IN THE VAGINA,
MAKING INTERCOURSE MORE COMFORTABLE FOR BOTH PARTNERS.

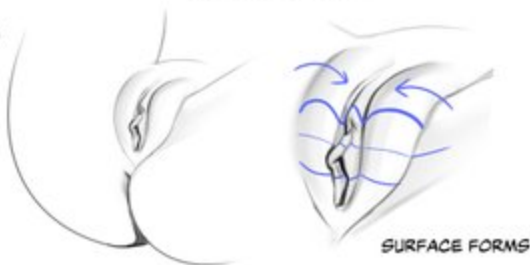

THE PENIS EJACULATES INTO THE
BASIN AT THE END OF THE VAGINA.
